

## MOUNTED SPEAKER CABLES

*with banana plugs BLACK SERIES*

The BLACK Series pre-mounted speaker cables embody the balance between performance and build quality. They are designed to connect your amplifier to your passive speakers while preserving the clarity and integrity of the audio signal.

Available in lengths of 2.5 metres, this pair of cables is equipped with banana plugs at each end, ensuring a simple, quick and secure connection.

AVAILABLE  
LENGTH

2x2,5m

The conductor consists of 7 strands of 20 wires with a total cross-section of 1.5 mm<sup>2</sup>, made of OFC ; this oxygen-free copper achieves a purity level of 99.99%, ensuring optimal conductivity while promoting smooth signal reproduction.

Inspired by the RED series, the insulation features a double construction with:

- An inner layer combining cotton and flexible PVC, ensuring good vibration absorption and protection of the bare conductors.
- An outer sheath made of braided textile and PVC, which is both flexible and resistant, protecting the cable from interference while facilitating its integration into the listening space.

Each cable is equipped with standard 3.6 mm banana plugs that are gold-plated to ensure stable and durable contact. They feature a spring-loaded blade that ensures optimal hold in the terminals for a reliable and effortless connection.

Each cable is color-coded to indicate the direction of signal flow from the amplifier to the speakers, ensuring consistent, high-performance installation in line with audiophile standards.

With its serious design and meticulous finish, the BLACK Series cable is aimed at users looking for a high-performance solution that is perfectly suited to balanced and demanding Hi-Fi systems.
