

OPERA OS25A MOUNTED SPEAKER

with banana plugs

Designed as a simple and effective solution for any audio system, OPERA OS25A pre-mounted speaker cables provide a reliable and neat connection between your amplifier and your passive speakers.

AVAILABLE
LENGTH

2x2,5m

With a total cross-section of $2 \times 2.5 \text{ mm}^2$, the conductor is made of oxygen-free copper (OFC), covered with a thin layer of tin. This treatment naturally limits metal oxidation while ensuring stable signal transmission.

The structure and braiding of the strands induce a direction of conductivity, so the sheath is marked to indicate the direction of the signal, from your amplifier to your speakers. The outer PVC sheath provides effective insulation and mechanical protection for the conductor. This material also has the advantage of good flexibility, making installation easy.

Available in lengths of 2.5 metres, this pair of cables is equipped with TRIANGLE BP450 banana connectors, allowing for simple, quick and secure connection.

These cables are fitted with BP450 banana connectors with a diameter of 4mm to ensure maximum compatibility. They guarantee easy installation with reliable contact, and their gold plating offers protection against oxidation.

OPERA cables fitted with OS25A connectors are the ideal solution for completing or upgrading your Hi-Fi and home cinema system while remaining affordable.
