

STEREO RCA CABLE

with Phono ground cable

Designed for audiophiles, the RCA cables in the RED range provide a reliable, high-quality analogue connection between your audio sources (turntable, DAC, CD player, etc.) and your amplifier or active speakers.

They guarantee faithful signal transmission without coloration, preserving the finesse of the sound reproduction.

AVAILABLE
LENGTHS

1m
3m

Each cable is made of OFC (Oxygen Free Copper) with 99.99% purity. This conductor is protected by careful insulation and shielding, combining a double layer of PVC and aluminum foil.

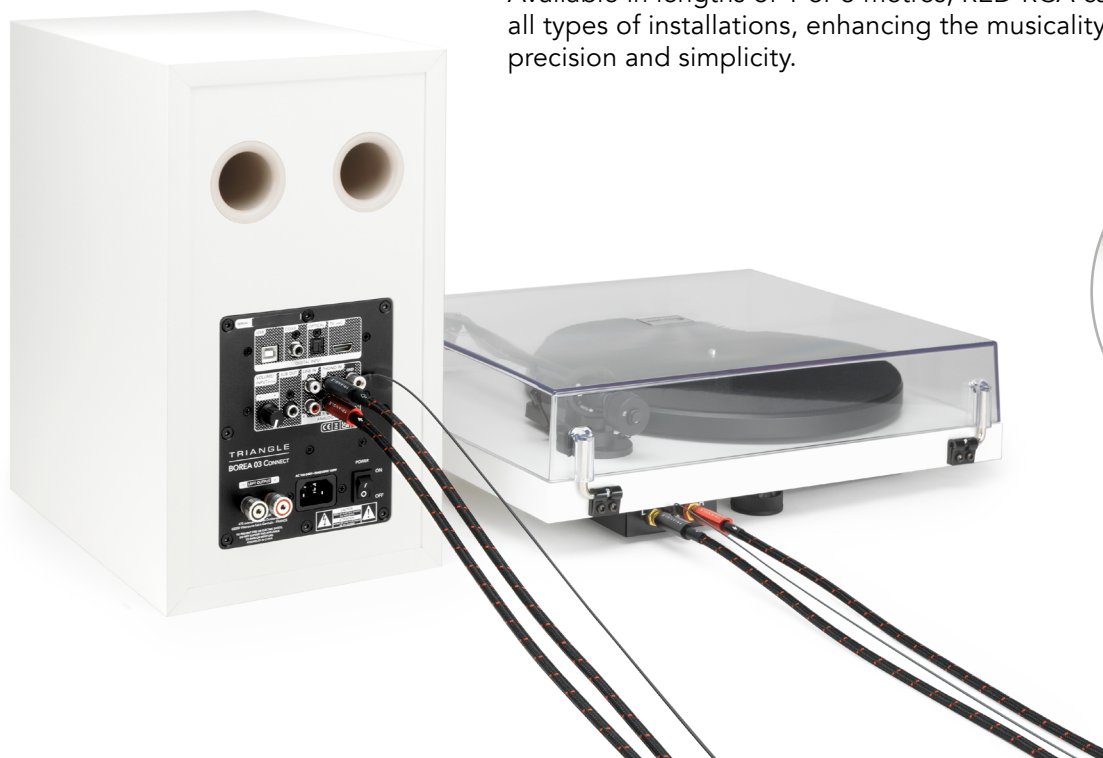

This multi-layer architecture provides particularly effective shielding against electromagnetic interference, ensuring stable transmission without disturbance.

The gold-plated RCA connectors ensure high-quality conductivity and excellent resistance to oxidation. Color-coded plugs simplify installation. The arrows indicating the direction of the signal must also be respected.

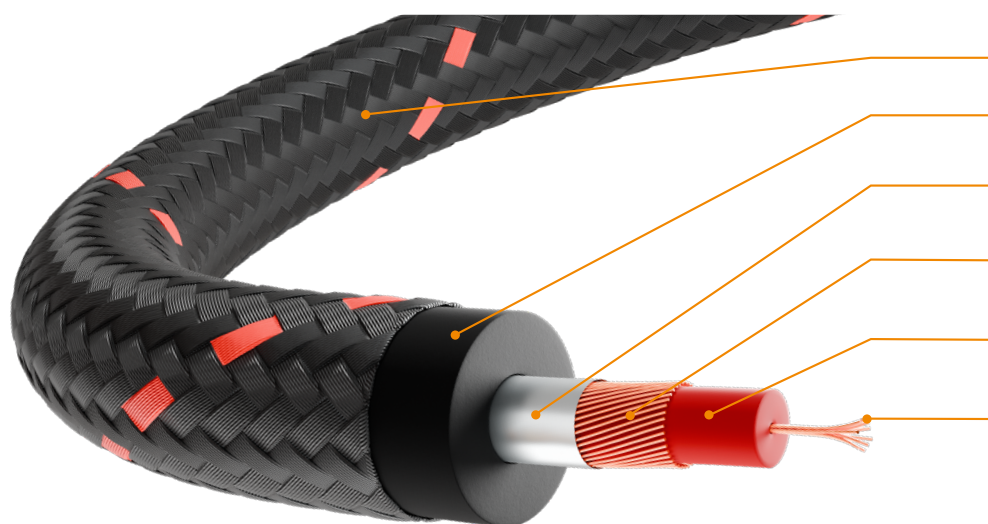

This dual labelling allows for precise cabling, in accordance with best audiophile practices, and contributes to consistent and balanced sound reproduction.

The RED Series RCA cables are also equipped with a ground cable, ensuring an optimal connection between your amplifier and your turntable.

Available in lengths of 1 or 3 metres, RED RCA cables are suitable for all types of installations, enhancing the musicality of your system with precision and simplicity.
