

Turntable - LUNAR1

The LUNAR 1 is a manual turntable designed for 33 and 45 rpm records. Built to the highest quality standards, it is assembled in Europe in partnership with Pro-Ject.

Designed to offer sound quality and ease of use, the turntable features a factory-set tonearm and cartridge. It is driven by a flat belt fitted under the circular platter.

The LUNAR 1 turntable is built using quality materials to reproduce the full richness and purity of your recordings. Its high-density fiberboard base (25kg/m³) allows to absorb vibrations and guarantees high purity of sound. The ribbed platter is made of ABS polymer to create a resonance-free platform.

Designed down to the smallest details, the lightweight, low-friction 8.6" aluminum tonearm is optimized for the OM-5E cartridge, which features an elliptical diamond stylus. The included phono cable features high purity oxygen-free copper (HP-OFC) conductors and gold-plated RCA connectors to ensure a perfect conductivity of the signal.

The tracking force is easily selected using the switch on the side of the turntable. To protect the board from dust, the LUNAR 1 is equipped with an acrylic cover with adjustable hinges.

The LUNAR 1 is available in 5 finishes: Black, White, Blue, Green and Cream.
